

Job Summary:

Performs civil engineering and/or architectural work in plan review and in the development of capital projects for the public works department. The work involves review of plans that are subject to County review and management of the design and construction of capital projects as assigned. Work is complex and may involve numerous calculations in disciplines such as in storm water management or other technical expertise. Employees in this class may be required to serve on a variety of special projects related to County engineering or architectural issues. The work requires training in civil engineering or architecture and/or considerable prior experience. The worker in this class provides technical supervision.

Minimum Qualifications:

Bachelor's degree in civil or structural engineering or architecture, six years of progressively responsible civil engineering, architectural or construction management experience that involved plan reviews and construction administration including managing staff, daily operations, customer service and policy development and implementation. Valid driver's license required. Professional engineer certification desired.
